

BAIKONUR COSMODROME

CHERNOBYL X

VISIT THE WORLD'S FIRST AND LARGEST COSMODROME IN BAIKONUR.

October 4th 1957, the first rocket carrying Soviet satellite Sputnik was launched into space. This very moment, followed by another important date - April 12th 1961 - when Yuri Gagarin onboard Vostok, the first manned flight, was sent to space and changed the history of the mankind forever. Since then, we've started to explore the outer space and the so-called "space race" between East and West started.

Chernobyl X is now giving you the opportunity to visit world's first and largest space launch facility built by the Soviets in the 1950's in the Kazakh desert. Yes, we're talking about Baikonur City, where Yuri Gagarin had his house and was trained for his very first flight with spacecraft!

Over 1 200 spacecrafts were launched into the universe from this base and it currently has a busy schedule, as it is managed by the Russian space agency until 2050. Almost every month there is a spaceship launch which you can be a part of!

From the roll-out until the legendary countdown, you'll witness the whole process of launching the spacecraft that usually takes up to 72 hours.

Are you ready to be part of this ONE-OF-A-KIND experience?

**3... 2... 1... IGNITION...
START!**

SET FOOT ON THE GROUND FROM WHERE THE FIRST COSMONAUT YURIJ GAGARIN FLEW INTO OUTER SPACE

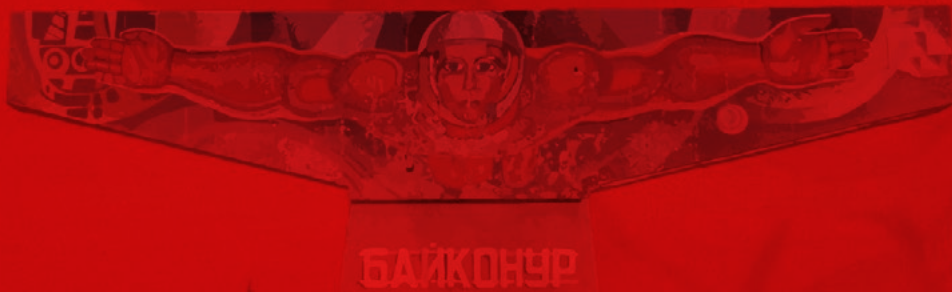

2-DAY TOUR

5-DAY TOUR
